UPS to RBC Cross-Reference

© 2009 Epower2go, Inc. All Rights Reserved

IMPORTANT NOTE: For any BK200 or BK200B, please verify battery configuration before purchasing. To verify, open the battery door and check the number of batteries inside the unit. One battery = (1) RBC2; two batteries = (1) RBC1. To verify the actual model number, look on the back of the UPS. You should see a label like the one above.

This cross-reference covers APC systems manufactured using RBC1 through RBC12 battery replacement packs. It is **ALWAYS** a good idea to visually inspect the battery pack **BEFORE** ordering replacements. Manufacturers change engineering and battery specifications without notice to consumers. Users should visually verify the type and number of batteries used in their systems **BEFORE** ordering. We will not be responsible for return shipping and reshipment charges for items ordered in error.
